## Apache

### Infinite Recursion from MOD\_REWRITE Rule

If you set up an Apache configuration, either in httpd.conf or an .htaccess file, that has a rule which redirects *all* incoming requests to Jaxer you can cause this issue. The solution is to not do this; that is, do not create a wild card rule which catch everything but instead use a more precisely targeted rule (say, just HTML files).

### Bad MOD\_REWRITE Rule

```
1. RewriteRule (.* ) entry.html [L]
2. JaxerFilter html
```
