

How do I debug server side code in Aptana Jaxer?

Asked 16 years, 6 months ago Modified 14 years, 7 months ago Viewed 519 times

I'm trying to debug some server-side JavaScript code running in Aptana Jaxer and I'm not having any success. I haven't even been able to find any tutorials or posts about this issue.

0

Does anyone know if it's possible and if so, what am I missing?

You can set you Jaxer.Config.DEV_MODE = true; to get some error information in your browser. Also use the Jaxer.Log to debug. Hope this helps a bit.

Jaxer and Aptana Studio do not yet have the ability to debug remote scripts from the client. I hope your code window show you the error message, of course, but it'd be pretty nice to have a console window, in Jaxer.Log.*.

is, in Jaxer.Log.*.

It is, it works, and it's often less useful for server applications and remote debugging. Wherever you want to know the state of the thing that's failing. Study the
